Quantitative Analysis of Markets and Organizations (QAMO)
David Eccles School of Business, University of Utah
Spencer Fox Eccles Business Building
1655 East Campus Center Drive
Salt Lake City, UT 84112-8939, USA

Dear Members of the Search Committee,

I am writing to express my interest in the Assistant Professor position in the Quantitative Analysis of Markets and Organizations (QAMO) division at the University of Utah's David Eccles School of Business. I am a Ph.D. candidate in Economics at Johns Hopkins University, advised by Professors Christopher D. Carroll, Nicholas W. Papageorge, and Stelios Fourakis, and I expect to receive my degree in May 2026. My research fields are macroeconomics, wealth and income dynamics, and computational economics.

My research agenda is unified by a focus on understanding the determinants of wealth inequality and the mechanisms through which heterogeneity in returns to wealth shapes aggregate outcomes. In my job market paper, I estimate the degree of heterogeneity in individual portfolio returns using micro data from the Survey of Consumer Finances and simulate a structural model in which households face idiosyncratic return risk. I show that allowing for persistent heterogeneity in returns substantially improves the model's ability to match the empirical distribution of wealth, offering a tractable way to connect micro-level return dispersion to macroeconomic inequality.

In a second project, I use the Health and Retirement Study to study the relationship between interpersonal trust and portfolio performance. Building on the literature that finds a hump-shaped relationship between trust and income, I show that a similar relationship holds for individual returns to wealth measured in the HRS data, highlighting a behavioral channel through which social attitudes shape saving and investment outcomes. This work also provides new estimates of the persistent component of returns to net worth, which motivate the calibration of heterogeneity in my structural model.

QAMO's mission of applying economic principles to business decision-making is an excellent fit for my research and methods. My work links household portfolio behavior and return heterogeneity to questions that are central to firm strategy and policy analysis: capital allocation under risk, distributional impacts of taxation, and the interpretation of micro data for forecasting and decision support. I look forward to collaborating with faculty and students across business economics, industrial organization, public/managerial economics, and empirical methods.

Teaching. My teaching experience centers on undergraduate macroeconomics and an upper-level macro policy seminar, where I have led weekly discussion sections and held regular office hours for classes ranging from 16 to 40 students. Consistent with my teaching statement, my approach is

student-centered: I aim to help students “convince themselves” that they have moved from confusion to understanding by holding structured office-hour coaching that builds trust and confidence. At the Eccles School, I am prepared to teach business economics and analytics courses (e.g., applied microeconomics for business, data analysis for economics using Python/Stata), intermediate macroeconomics for business, and quantitative methods. I would also welcome developing electives such as *Economics of Inequality and Tax Policy* or *Computational Economics for Business Decisions*, emphasizing reproducible workflows and evidence-based decision-making.

I believe I would be a strong fit because my computational and empirical toolkit allows me to (i) produce robust, data-backed estimates of returns and distributional outcomes, (ii) build and validate models that speak to corporate, regulatory, and policy-relevant questions at the intersection of business economics and strategy, and (iii) collaborate across teams to present insights in concise, actionable formats for diverse audiences. I am excited by QAMO’s applied, multidisciplinary environment, where academic rigor meets high-impact business and policy engagement.

I would be honored to contribute to the Eccles School’s research and teaching mission and to mentor students pursuing quantitative careers in economics and business. Thank you for your consideration; I welcome the opportunity to discuss my fit with QAMO at your convenience.

Sincerely,

Decory Edwards
